

5. STACK BASED BUFFEROVERFLOW ATTACKS

DATE: 25/02/2026

Aim: To explore CVE-2019-18634 in the Unix Sudo Program.
Procedure:

1. Log into TryHackMe and open the Sudo Buffer Overflow room.
2. Study the basics of buffer overflow vulnerabilities in Unix systems.
3. Understand the vulnerability CVE-2019-18634 in the Sudo program.
4. Analyze how improper input handling leads to memory overflow.
5. Explore the steps used to identify and exploit the vulnerability in a controlled environment.
6. Complete the tasks and answer the questions in the room.
7. Review mitigation techniques and confirm completion.

Tasks:

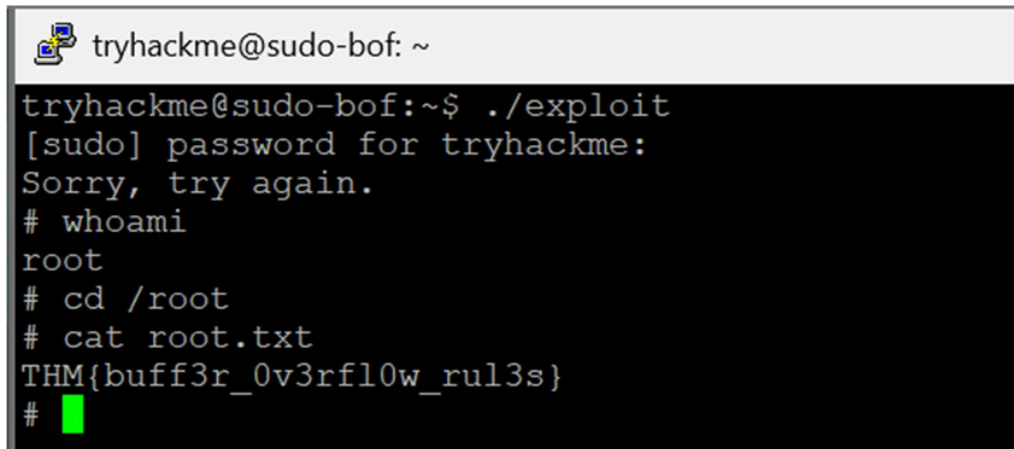

TASK 1 – Deploy!

TASK 2 – Buffer Overflow

```
tryhackme@sudo-bof: ~  
tryhackme@sudo-bof:~$ ./exploit  
[sudo] password for tryhackme:  
Sorry, try again.  
# whoami  
root  
# cd /root  
# cat root.txt  
THM{buff3r_0v3rf10w_rul3s}  
#
```

Result:

Thus the TryHackMe room Sudo Buffer Overflow was completed successfully.
